Gov. Roy Asberry Cooper III,

Clean, renewable energy is achievable.  
It has been growing at an amazing rate over the past 10 years.

The amount of sunlight that shines on our country in a single year could provide 100 times more power than we need, and it's pollution-free. But solar isn't growing as fast as it should. We can and should make North Carolina a leader in solar energy. I understand that you are working with a state legislature that does not prioritize our environment, but we are counting on you to be forward-looking and see beyond short-term interests. Duke Energy has "called the shots" for too long. Their interests have resulted in environmental clean-up projects that will ultimately cost consumers more for energy.

I'm calling on you to support pro-solar and renewable energy policies to put North Carolina at the forefront of the clean energy revolution.

Sincerely,

Pam Holt
